01 — PROGRAM OVERVIEW

This program is designed for complete beginners who want to understand the foundations of Web Development through practical learning.

02 — WHAT YOU WILL LEARN

Module	What it covers
Introduction to Web	How the Web works, browsers, the Internet, and the basic flow of a web request.
DNS, URL & HTTP	Understand domains, URLs, requests, responses, and how browsers communicate with servers.
HTML	Build the structure and content of web pages using semantic HTML.
CSS	Style and organize web pages and create clean, responsive layouts.
CSS Libraries	Discover how CSS libraries can speed up interface styling and development.
Algorithms	Develop logical thinking and problem-solving skills through programming exercises.
JavaScript	Learn programming fundamentals and add behavior and interactivity to web pages.
DOM	Select, manipulate, and respond to elements on a web page using JavaScript.
Git & GitHub	Track changes, manage your code, and work with repositories and projects.

03 — BY THE END OF THE PROGRAM

- ✔ Understand the basic architecture of the Web and how a browser communicates with a server.
- ✔ Build structured and styled web pages with HTML and CSS.
- ✔ Use JavaScript and the DOM to add interactivity.
- ✔ Develop logical thinking and basic problem-solving skills.
- ✔ Use Git and GitHub to manage your projects.
- ✔ Build a simple web project from scratch.

START FROM ZERO. BUILD THE FOUNDATION. CREATE YOUR PROJECT.
